

Enterprise

Manager™

The total Enterprise solution that's also totally affordable

What is Enterprise Manager?

Built for multi-unit restaurant companies, 24-7 Hospitality Technology's **Enterprise Manager™** is built to grow with your business. It offers demonstrated profitability and operational efficiency at a lower cost.

- **Control pricing and promotions** across the multi-unit foodservice organization.
- **Consolidate sales data and transaction details** from your stores into analytical reports like sales trends, cost comparisons, labor costs etc.
- **Connect all your locations** and systems.

Leveraging the Internet and its related technologies, 24-7 Hospitality Technology helps you extract the data from each of your outlets to give you secure access to your information anywhere, anytime. Grow from a single store to a group or even an enterprise.

Enterprise Manager was designed from the ground up for multi-unit organizations to provide clear visibility of performance at every location, every day. You can automatically initiate changes via your PC, iPad or mobile phone to defined locations. Data changes have never been easier.

Data can be extracted from a variety of sources, including other POS systems, so you can grow into our enterprise solution, independent from a retrofit of all your locations.

How it works

Leveraging the internet and its related technologies, Enterprise Manager extracts the data from each store to give you access to the information anywhere, anytime. The system provides selected visibility for your back office database for sales reporting, pricing and employee scheduling.

Your company is viewed as a group (all sites listed under your company) for a price of \$250 a quarter. This would be for one site or 100 sites. Your company will be charged \$60 an hour, charged in 15 minute increments, for any changes required each month. If no activity, no charge.

The database is always secure and locked down. You or your management never touches or changes the database at the site. Only 24-7 Hospitality Technology and our partner Bullseye Restaurant Controls will touch your database.*

Over 125 Buffalo Wild Wings franchise outlets use components of Enterprise Manager.

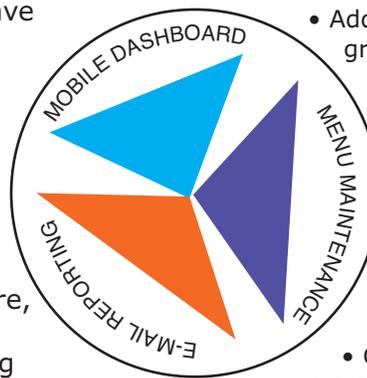

What are the Enterprise components?

— **Mobile Dashboard...** provides real-time information on the go. See performance data on your mobile phone, iPad or laptop. Anything you can see at the site you can see on your phone or tablet. Without being on the site, you can share this data with anyone in your organization.

— **Menu Maintenance...** simply add all changes you want done to any or all of your sites and e-mail or fax to our data center. A 24 hour turnaround is provided. 24-7 Hospitality Technology will be responsible for the database changes and make these changes for your restaurants. Data management has never been easier.

- Add, delete or modify a location, group of locations.
- Group your restaurants any way you like; for instance, by region within each concept, by franchisee, or company-owned locations.
- Detailed or summary reports are available for any location, group of locations, concept, or group of concepts.
- Change prices or implement promotions in all or selected locations.

— **E-Mail Reporting...** the Enterprise Manager system sends reports to all owners, partners or managers for any authorized reports available at headquarters and each restaurant. This can be done daily, weekly, or monthly.

24-7 Hospitality Technology LLC

* Our partner Bullseye Restaurant Controls will be responsible for setting up your database correctly and to your specifications. 24-7 Hospitality Technology manages and maintains the database. We need a 24 hour advance notice on normal changes but longer even if it is an entire menu. We are responsible for ALL changes made at the sites. This would include all sites you want under Enterprise Manager. Then each of your sites can go to a Portal and fill out electronically a request for a change at one or all of your sites. This could be a new item, an old item or a change to that item. It could be a price change or even new taxing at that site. It could be a whole new menu. 24-7 Hospitality Technology then will process that request and make sure your data is implemented correctly and on time.
