QSR AUTOMATIONS®

The Total Kitchen Display Solution

24-7 Hospitality Technology helps ensure consistency, food quality, and optimum ticket times. By adding the QSR Automations® kitchen display solution, restaurants also gain access to critical production data in real-time and historical formats, empowering in-restaurant and corporate team members with information needed to further enhance the guest experience.

Widely recognized as the leader in kitchen display technology, QSR helps all types of restaurant businesses worldwide to measurably increase efficiency and quality, creating positive guest experiences. QSR's innovative ConnectSmart® solutions include kitchen display, recipe viewer, seating and wait list management with in-store and online call aheads and reservations.

The solution helps all of a restaurant's staff work together more efficiently by organizing workloads, improving productivity, and delivering better, more effective service. The system helps make a difficult and demanding job easier, so that a less experienced person can do it just as well.
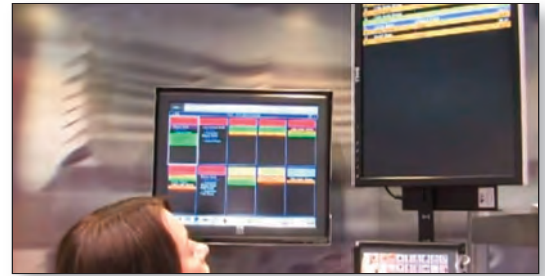

QSR's comprehensive, fully integrated solutions include innovative software and durable hardware designed with the rich feature sets and high reliability needed to excel in the demanding pace of a restaurant. The solution includes these features:

- **Kitchen Display—**Robust software solutions are definable for your specific restaurant operation.

- **Recipe Viewer—**Easily manage and graphically present key recipe information in the kitchen and beyond.

- **Table Management—**Provides efficient seating and accurate wait times for walk-ins, in-store or online call-aheads, and reservations.

- **Restaurant Reservations—**In-store, online, and mobile reservation options builds guest loyalty and capture guest data.

- **Restaurant Hardware—**Purpose-built devices support even the harshest kitchens and busiest hostess stands.

24-7 Hospitality Technology is a nationwide restaurant management systems provider that has supported thousands of systems in the hospitality and restaurant industries for over a decade.

By adding the QSR kitchen display solution, Northbrook Illinois' Buffalo Wild Wings franchisee gains access to critical production data in real time.

24-7 Hospitality Technology, an authorized reseller for QSR Automations®, announces that it has implemented QSR's automated kitchen display software and hardware within over 70 franchise operators of Buffalo Wild Wings Grill & Bar® restaurants.

The stores find that they are running better ticket averages and higher volumes than established stores running paper systems, as well as gaining access to critical production data in real-time and historical formats, empowering their in-restaurant and corporate team members with information needed to further enhance the guest experience.

Here's what these BWW franchisees have to say:

"Previously, when looking at kitchen video systems, they seemed inefficient. With our new store opening we decided to put in QSR's kitchen display system through 24-7, and it has been great. Now I dread having to go into the kitchens at our other stores during a rush and dealing with the uncontrolled chaos of paper tickets after using QSR's kitchen display solution,"

Bret Robertson
Director of Growth and Development at Stauffer and Associates, operator of Buffalo Wild Wings restaurants in South Bend, IN.

"I am extremely happy with the results while I am at the same time wishing that I would have made the switch sooner. Since relying on 24-7 to implement a total technology solution in our restaurants, we have been better able to effectively and efficiently service our customers,"

Trey Woessner, President / CEO
Buckeye Restaurant Concepts, Inc.,
Operator of the Buffalo Wild Wings franchise in Arvada, CO.
